

SUTRON Beaded Chain with 12.5 cm centers for use with beaded cable wheels (specify length)

Product #: 5100-0581
USD Price: Contact Hach

Sutron Float Wheels and Sprockets are components used to modify various Sutron Shaft Encoders or other water level measurement sensor devices used to compute absolute water level. Relative to the environment being monitored, variable sprockets and / or float wheels may be interchanged to better quantify water level changes by means of accumulated rotational movements of a rotary encoder's shaft.
