

## HYDROLAB Conductivity Sensor for HL Series Sonde

**Product #:**

**HLCOND**

**USD Price:**

Contact Hach

The HYDROLAB conductivity sensor uses four graphite electrodes in an open cell design to provide extremely accurate and reliable data with very low maintenance. The sensor is used to measure specific conductance, salinity, total dissolved solids (TDS), and resistivity.

(accessory cannot be purchased as a standalone product)

### Specifications

*Parameters Measured:	Conductivity
	Raw conductivity
	Specific conductivity
	Salinity
	TDS
Accuracy:	±0.5% of reading + 0.001 mS/cm
Compatible Instruments:	HL4 & HL7
Housing Material:	Plastic sensor housing
Measuring Range:	0 - 100 mS/cm
Measuring Range Depth:	200 m
Methods:	SM 2520-B Standard Methods for the Examination of Water and Wastewater
Operating Temperature Range:	+23 - +122 °F (-5 - +50 °C), non-freezing
Resolution:	0.001 mS/cm
Sample probe:	N.A.
