

HYDROLAB pH Sensor for HL Series Sonde with Standard Reference

Product #: HLPHSREF
USD Price: Contact Hach

The HYDROLAB pH sensor uses a glass bulb measuring electrode and refillable reference electrode, each in their own sonde port. A user-rebuildable reference electrode extends the life of the pH sensor while minimizing costs because the measuring electrode does not necessarily need replacement when the reference electrode is depleted.

(accessory cannot be purchased as a standalone product)

Specifications

*Parameters Measured:	pH
	pH units
Accuracy:	±0.2 pH
Compatible Instruments:	HL4 & HL7
Housing Material:	Glass bulb
Measuring Range:	0 - 14 pH
Measuring Range Depth:	200 m
Methods:	SM 4500-H Standard Methods for the Examination of Water and Wastewater
Operating Temperature Range:	+23 - +122 °F (-5 - +50 °C), non-freezing
Resolution:	0.01 pH
Sample probe:	Standard Probe
