**Product #:** USD Price: CTD040MLI

Contact Hach

The OTT CTD is an integrated sensor and datalogger for measurement of water level, temperature, and conductivity in groundwater and surface water applications.

It features a robust ceramic measuring cell for long term accuracy and has outputs for salinity and total dissolved solids (TDS). Its built in datalogger manages and stores all measurements at user-programmable intervals.

#### **Complete Solution**

Pressure sensor with built-in data logger manages and stores pressure, depth to water, water level (stage), temperature measurements as well as conductivity at programmable intervals.

#### Conductivity measurement

Outputs for conductivity include specific conductivity, salinity, and total dissolved solids.

#### Accurate

Long-term accuracy: a robust ceramic pressure cell will not deform over time, and an accurate 4-electrode conductivity measuring cell provides outputs for salinity and total dissolved solids (TDS).

#### High Performance

Mechanical resistance to pressure overload and corrosive waters.

### Flexible Installation

Easily installs in wells or pipes of 1 inch diameter or larger with use of convenient adapter plates.
