

SUTRON Wireless Bridge, I/O Module

Product #:

WSDI-SIO

USD Price:

Contact Hach

SUTRON's SDI-Link provides a way for an SDI-12 data recorder to read one or more SDI-12 sensors located up to 1 mile away using un-licensed band radios.

SDI-Link is composed of two parts: Client Modules that connect to SDI-12

dataloggers & Server Modules that connect to SDI-12 sensors. Extended range of up to 1 mile LOS (line of sight) allows the user to get data from sensors that previously would have required a separate data recorder or long, expensive cables.

Versatile

The SDI-Link is fully SDI-12 V1.3 compliant and will work with any compliant sensor and data recorder.

More convenient

The extended range of up to 1 mile LOS (line of sight) allows the user to get data from sensors that previously would have required a separate data recorder or long, expensive cables.

Easy installation

The SDI-Link comes in a NEMA-4 rated enclosure with built-in antenna that easily mounts outdoors on a wall or pipe.

Specifications

IO Support: Yes
